â .. ¿

In view of the newly found prior art and upon further consideration, claim 6 has been examined on its merits. However, in view of applicant's election of the species of claims 2, 3 and 5 on January 9, 2006, claims 1, 4 and 8-10 have been examined only insofar as said claims read on polysaccharides.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 2, 4, 6 and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Schroeter (U.S. Patent No. 2,980,535).

Application/Control Number: 10/690,847

Art Unit: 1623

Schroeter discloses the claimed polycyclic fused aromatic groups chemically bonded to polymers such as polyvinyl alcohol and cellulose (columns 3-4).

Claims 1-6 and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schroeter (U.S. Patent No. 2,980,535).

Schroeter discloses light-sensitive compositions comprising polymers bonded to polycyclic fused aromatic groups. As suitable polymers Schroeter discloses cellulose derivatives as hydroxymethyl cellulose or hydroxyethyl cellulose. However, since Schroeter also teaches that "other cellulose derivatives which contain free hydroxyl groups" can also be used (column 4, lines 1-2), a person having ordinary skill in the art at the time the present invention was made would have been motivated to use cellulose derivatives such as hydroxymethyl cellulose or hydroxyethyl cellulose which contain free hydroxy groups. Also, Schroeter discloses that any polymer having reactive groups such as hydroxyl groups or carboxyl groups can be used (column 3, lines 1-5). Therefore, a person having ordinary skill in the art at the time the claimed invention was made would have been motivated to use polymers such as those encompassed by the instant claims which have reactive hydroxyl groups. Therefore, the claimed compounds are prima facie obvious over the compounds disclosed by Schroeter.

Applicant's arguments with respect to claims 1-6 and 8-10 have been considered but are most in view of the new ground(s) of rejection.

Application/Control Number: 10/690,847

Art Unit: 1623

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elli Peselev whose telephone number is (571) 272-0659. The examiner can normally be reached on 8.00-4.30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shaojia Jiang can be reached on (571) 272-0627. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
